

Herder Idea

REDUCE, REUSE, RECYCLE

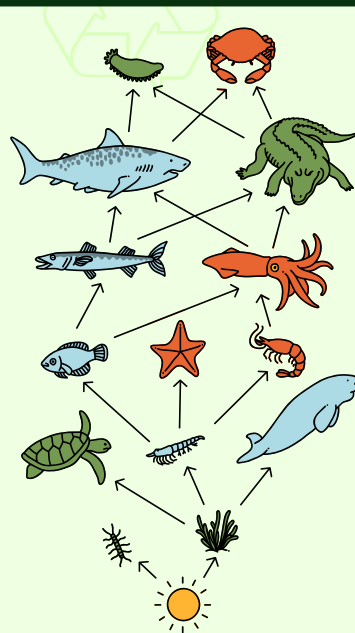

What is the Green Feed Concept?

A Concept invites us to a simple yet effective approach to reducing our negative impact on the environment.

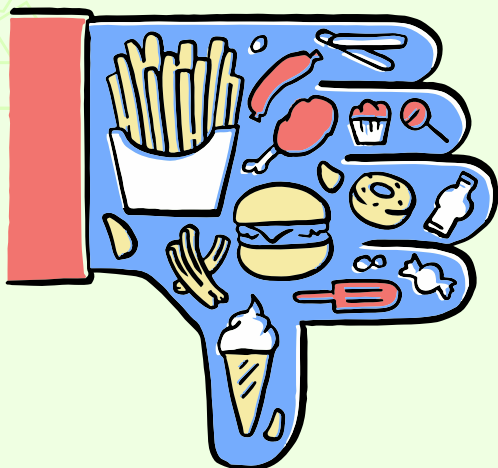

Reduce

Reduce the amount of goods and resources we use in our daily lives, whether at home, school or work.

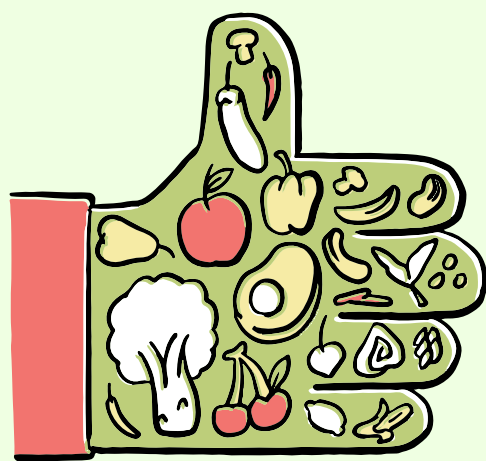

Reuse

Involves efforts to reuse wastages or products so that they do not immediately expire.

Recycle

Recycling processes waste into new products that can be reused, requiring collection, separation, and processing.

By following and implementing these principles, we can help maintain the balance of ecosystems, slow climate change, and ensure resources remain available for future generations.
